## OilMaster

MasterSystem Technologies offers an oil cleaning and rejuvenation solution that is focused on the recycling and re-use of Crank, Hydraulic and Transmission oils. The focus is on the environment with the emphasis on minimising improper disposal and spillage of oil.

### Oil Sampling & Analysis

*Microscopic cameras are used to examine contaminants in oil such as, metal debris, general contamination, heavy contamination, water ingress and other contaminants.*

*External filtration systems used on machines to trap contaminants targeting particles of 5 microns and over, which are particles that cause the most damage to machine elements.*

### Oil Cleaning & Testing

*Samples are collected and analysed for contaminants and then processed and recycled.*

### Spill Kits & Bundings

- Oil Absorbent Pads
- Oil Sorb Granules
- Absorbent Socks
- Pillows
- Waste Bags

- Free Standing bund
- Collapsible
- Customised sizing
- Light Weight
- Chemically resistant
